<u>How to in Details</u>

1. What are the Server Requirements to activate the script?

Ans: To install the Script minimum server requirements are:

- Php version 7.2+
- MySQL 5.6+
- mod_rewrite Apache
- BCMath PHP Extension
- Ctype PHP Extension
- JSON PHP Extension
- Mbstring PHP Extension
- OpenSSL PHP Extension
- PDO PHP Extension
- Tokenizer PHP Extension
- XML PHP Extension
- ZipArchive Extension

In most servers, these extensions are enabled by default, but you should check with your hosting provider.

2. How to install the script?

Ans : To install the script follow the steps below.

- Extract the downloaded .zip file from codecanyon on your PC.
- **Upload** the Install.zip file to your server **public_html** or any other **directory** you intend to run the script.
- **Extract** the zip file in that directory.
- Create a new database from your server **MySQL database**.
- Create a DB **user** to the database and link that **database** to the **DB user**.
- First, hit your **site URL** and it will automatically take you to the **installation**.
- Click on the **Start Installation Process**.
- You will get the **Checking File Permission** page. If everything is ok then click on **Go to the next step**.
- Now you need to set **Database Host, Database Name, Database Username, Database Password,** and click **Continue**.
- Now you need to **import the SQL file**.
- Now **fill up the information of the shop** and click **Continue**.
- Click on **Go to Home/ Login to the admin panel**.

3. **How to activate the script?**

Ans : Following the given procedure below will make the license activated for your domain and you'll be able to use the script smoothly:

- Open the link in the browser.
- In the respective fields, put your Name, E-mail, **CodeCanyon Username, Purchase Key** and your intended **domain name** for the script and verify the captcha.
- The form will be submitted to check the purchase key and then activate the licence for that domain.
- You can change the activation later from this same form. Activating a Regular license again with another domain name will remove the activation of the previous domain.

4. **How to download the latest version?**

Answer: To download your item(s):

- Login to your Codecanyon account.
- Hover over your username from the top right corner and click 'Downloads' from the drop-down menu.
- The downloads section displays a list of all the items purchased using your account.
- Click the 'Download' button next to the item and select 'Main File(s)' which contains all files, or 'Licence Certificate and Purchase Code' for the item licence information only.

5. **How to upgrade to the Latest Version?**

Answer:

a. **Extract** the **downloaded file** from codecanyon.
b. There you will get a zipped folder named '**updates.zip**'. **Upload** that to the root directory on your server in where your previous version is running. **Unzip** that updates.zip file by selecting "**Extract here**".
c. Now **reload** the home page and click on '**Update Now**'.
d. It's **Done**!
e. The full system has been **updated** with a **single click**.
f. Let's Browse Active eCommerce cms **Latest Version.**

6. **Where will I find purchase code?**

Answer:

- **Log into** your Envato Market account.

- Hover the mouse over your **username** at the top of the screen.
- Click **'Downloads'** from the drop-down menu.`
- Click '**License certificate & purchase code**' (available as PDF or text file).

43. How to add Attribute for the system?

Ans : Follow the below steps to add attribute system :

- **Login** into your admin panel.
- Go to **E-commerce Setup** -> **Attribute**.
- Click on **add new attribute**.
- Fill the **attribute name** like: size, fabric, storage etc.
- Click on **save.**

44. How does attribute work?

Ans : At the time of product uploading Vendor or Admin can use attributes for their product variations. For example, a vendor is going to upload a new product mobile. Vendor has three different variation's mobile based on storage. For this he just needs to select the attribute like storage and then he just puts the value like 32 GB , 64GB, 128GB. After that he can set the price as previously how he did.

45. What is the new advanced filter option?

Ans : Advance filter option means customer or user can search any product using attribute value. For example, Storage is an attribute and 32GB, 64GB, 128GB are the value of Storage attribute's. If any user or customer wants to see the all mobile of 32B storage he just needs to follow the below steps:

- Users or customers just go to the **product listing page**.
- There he/she will get the **value of attributes** at the **left side** below the categories list.
- He/She needs to **select 32GB** and click on **Apply Filter**
- He/She will get the **result**

Note: You can grant access to specific users after you create the bucket.
Block public access (bucket settings)
Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. Learn more
Block all public access
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.
Block public access to buckets and objects granted through new access control lists (ACLs)
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
Block public access to buckets and objects granted through any access control lists (ACLs)
S3 will ignore all ACLs that grant public access to buckets and objects.
Block public access to buckets and objects granted through new public bucket or access point policies
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
Block public and cross-account access to buckets and objects through any public bucket or access point policies
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

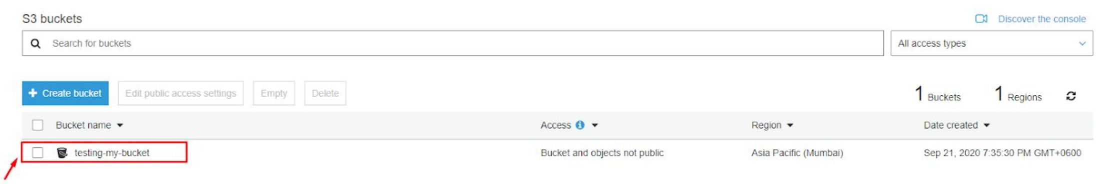
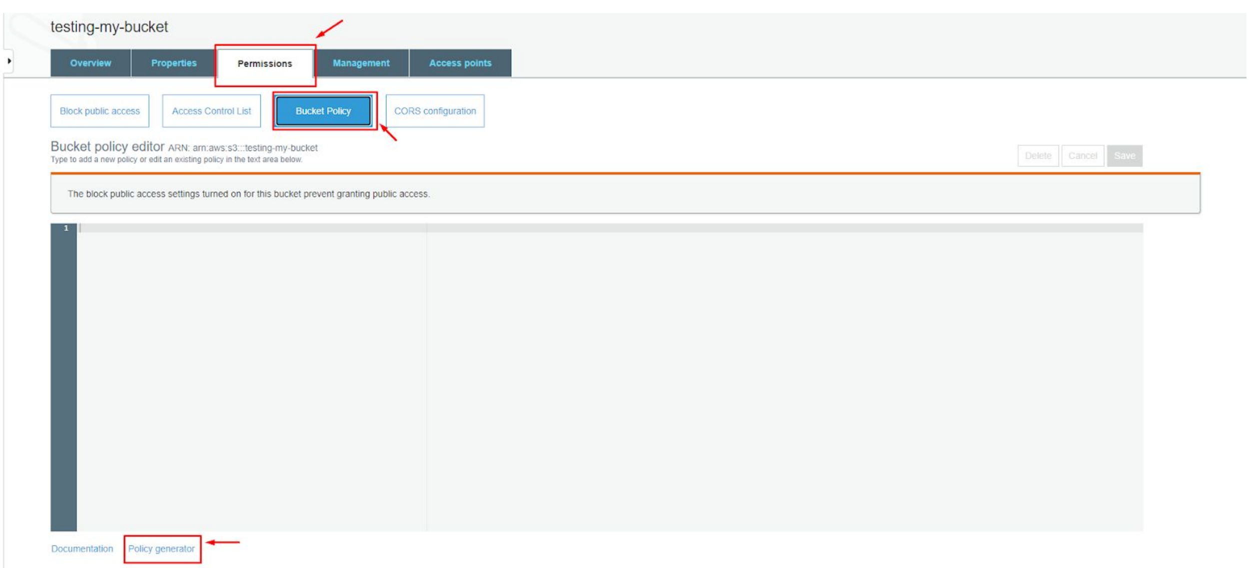
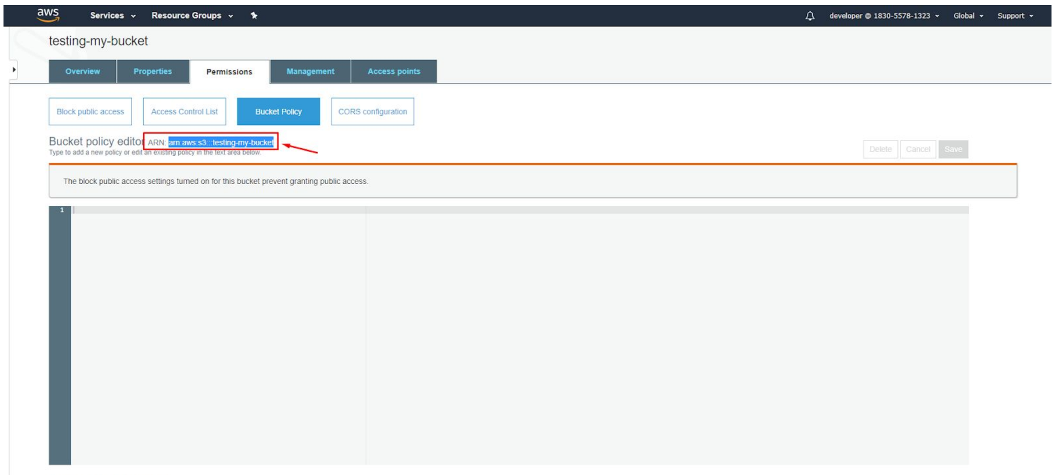
- Then you'll be able to see the bucket that you created. Click on the bucket.

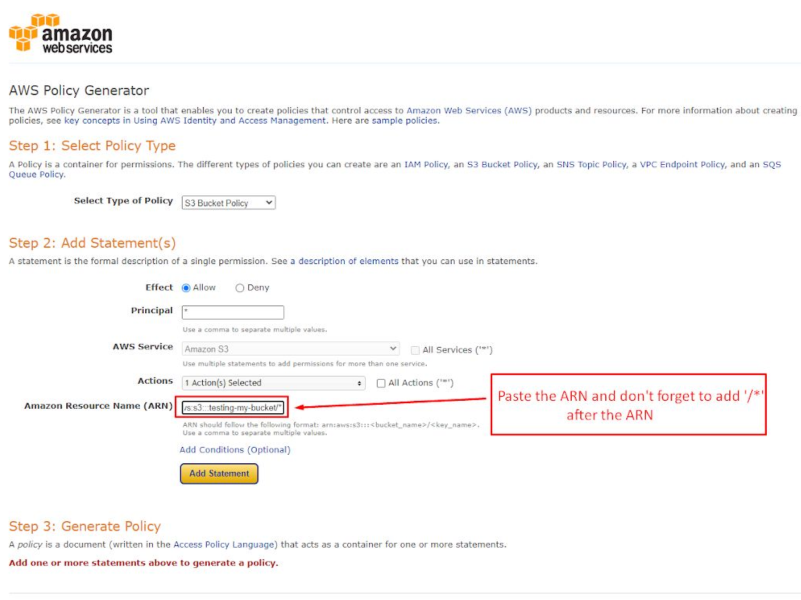


- It'll take you to the bucket details. From their go to the **Permissions** menu and then click on the **Bucket Policy** below there you will find the **Policy generator** blue button. Click it.

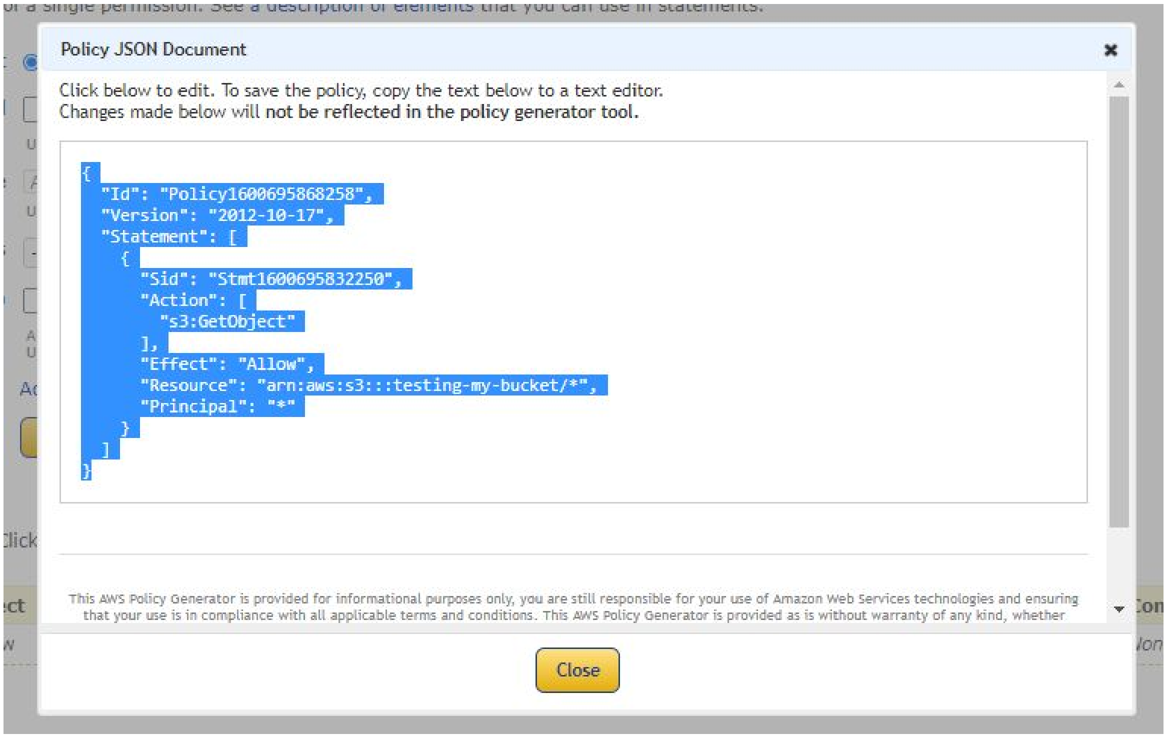


- The UI will appear after clicking the button. For the policy type insert **S3 Bucket Policy** and for **Principal** insert * and from the **Actions** dropdown select box select **getObject.** And follow the convention mentioned inside the red box highlighted with red text color for the **ARN value.** The ARN value will be found in the previous page from where we came from. Just follow the instructions mentioned inside the images below.

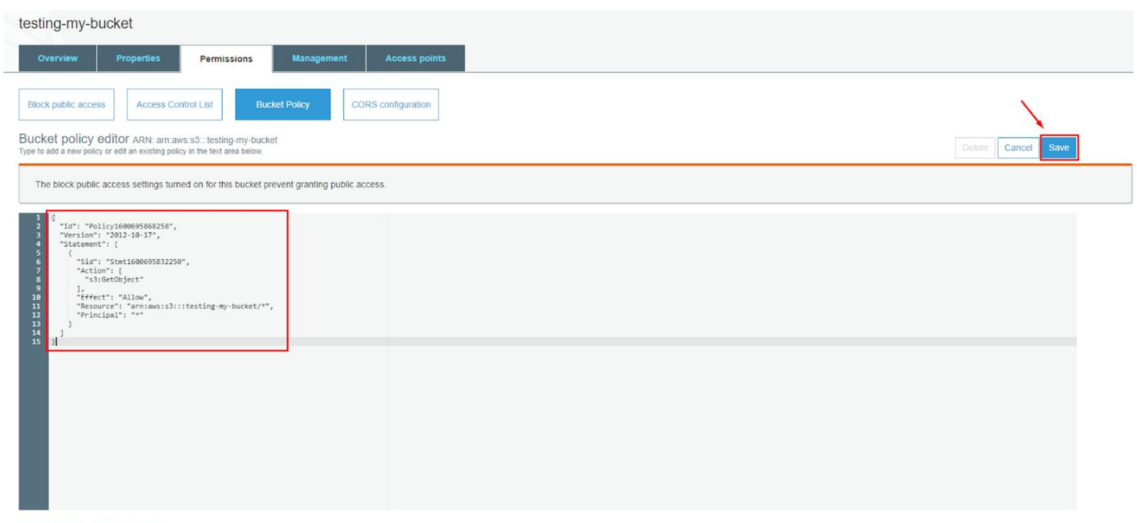




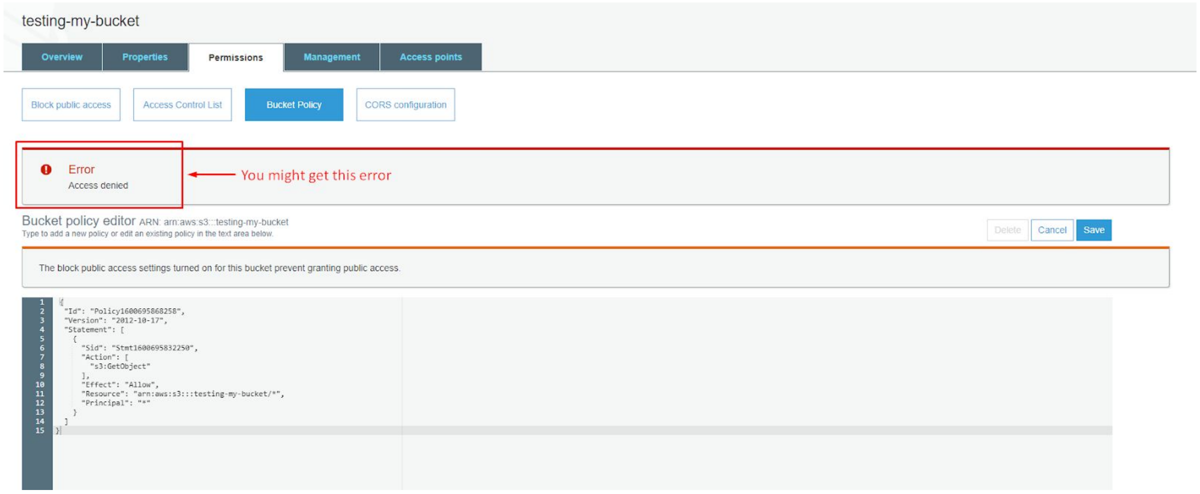
- Finally, click the **Generate Policy** button.
- You will see a pop up and there you will find some text. Copy the texts.



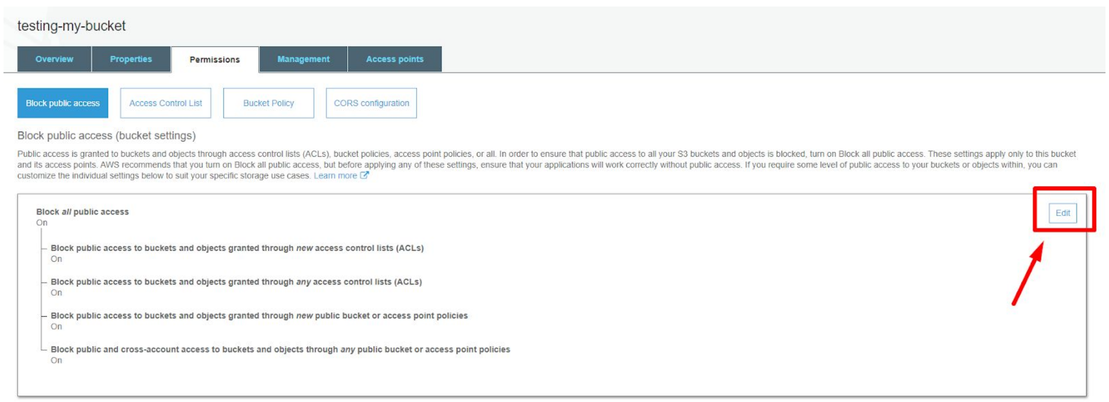
- And paste it inside the box shown below. And then click **Save** .



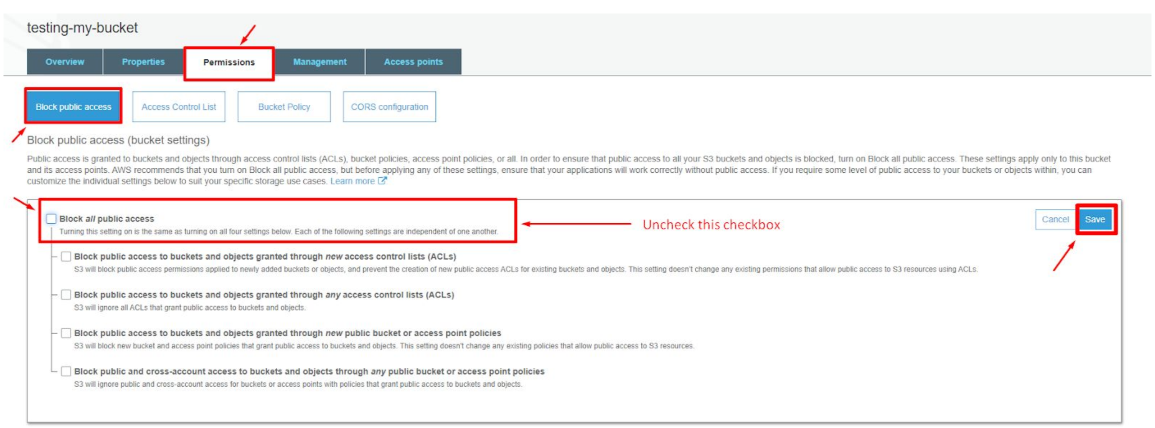
- You might encounter an error shown below.

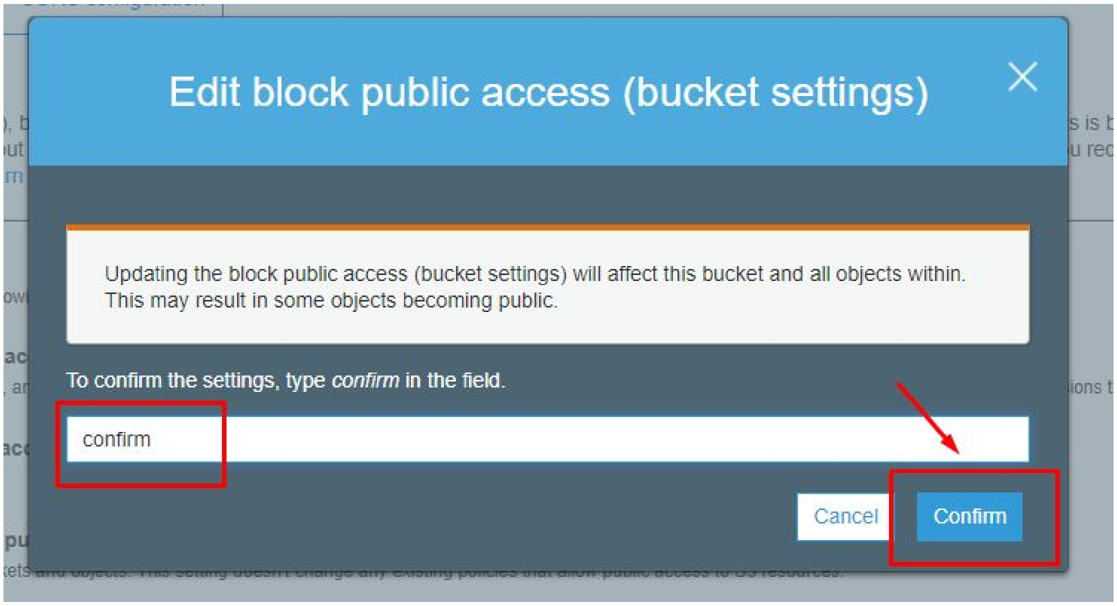


- To get rid of this error you need to go to the **Permissions** menu and then go to the **Block public access** menu and then click the **Edit** button shown below.

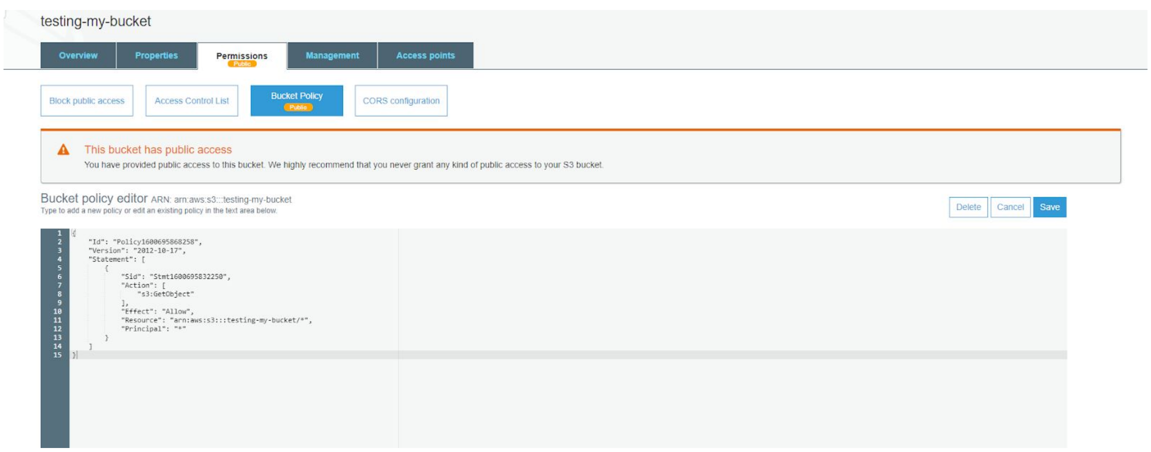


- After you have gone to the menu mentioned above uncheck the checkbox saying the following “**Block all public access**” and then click the **Save** button. A pop up will appear and tell you to type in the word **‘confirm’** and then click the **confirm** button.

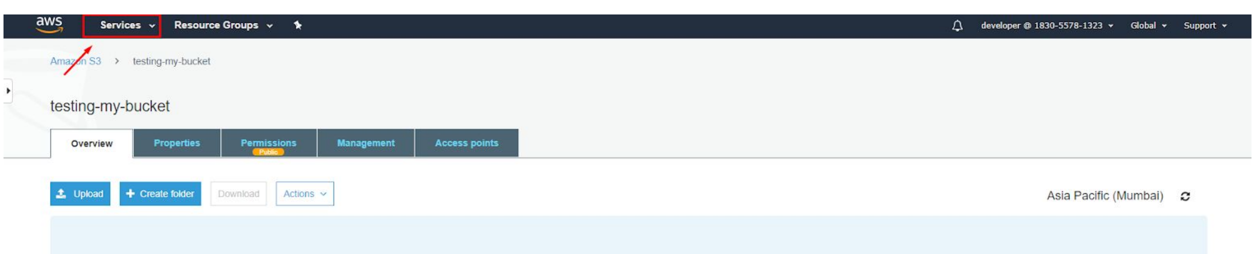




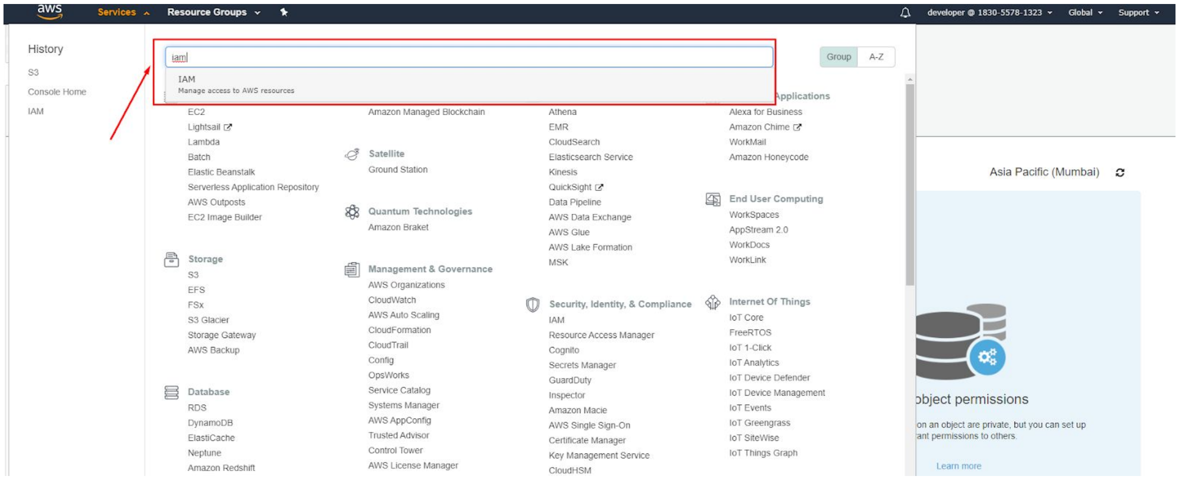
- After you have done all the instructions mentioned above you need to have to go to **Permissions** -> **Bucket Policy** and now try and paste the texts and click the **Save** button as mentioned in the instruction above. If all goes well you should see the page shown in the image below. Saying the yellow text “**This bucket has public access”.**



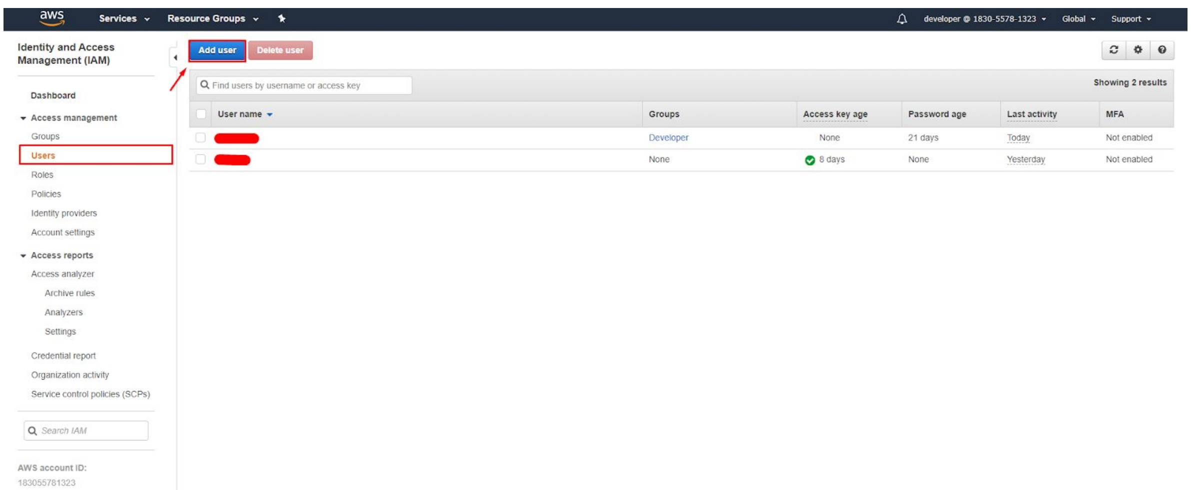
- Then, notice the rop nav of your page and there is a button saying **Services.** When you hover over it it drops a menu down.



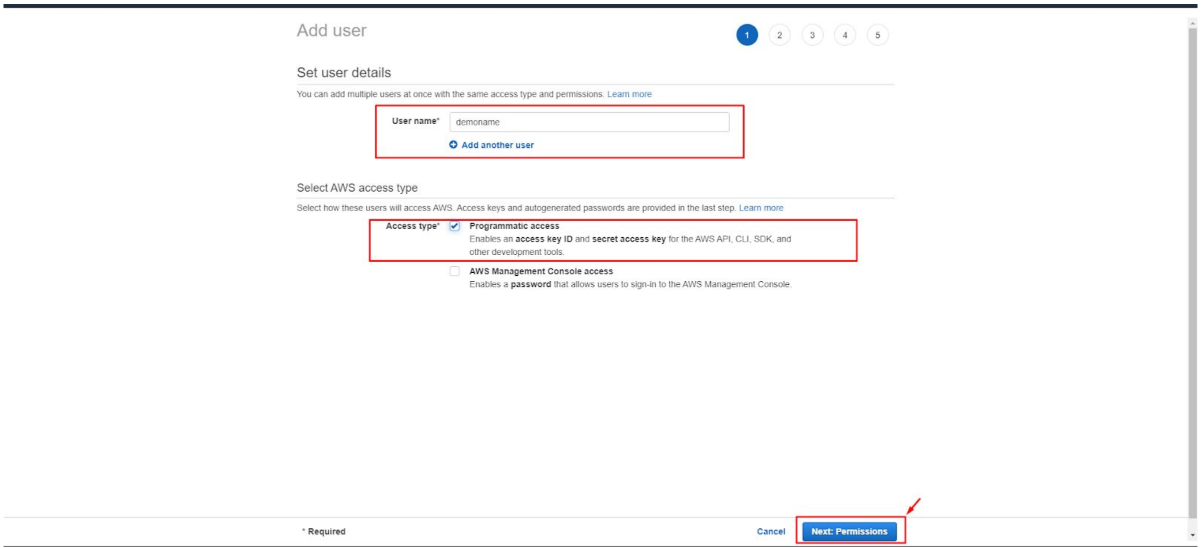
- Inside the menu there is a search bar. Inside the search bar type in **'iam'** and search result will be shown to you. Select the first result that comes up.



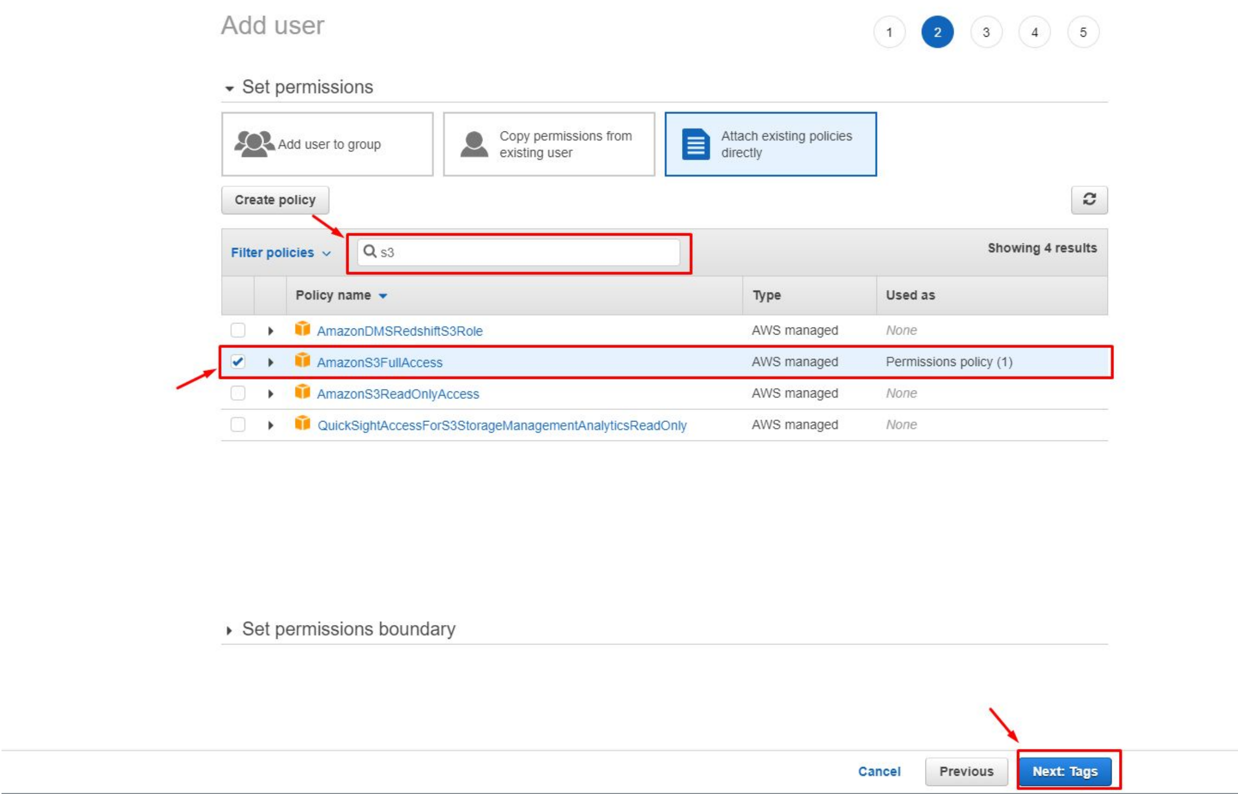
- Then go to the **User** menu as shown in the image below and click the **Add user** button.



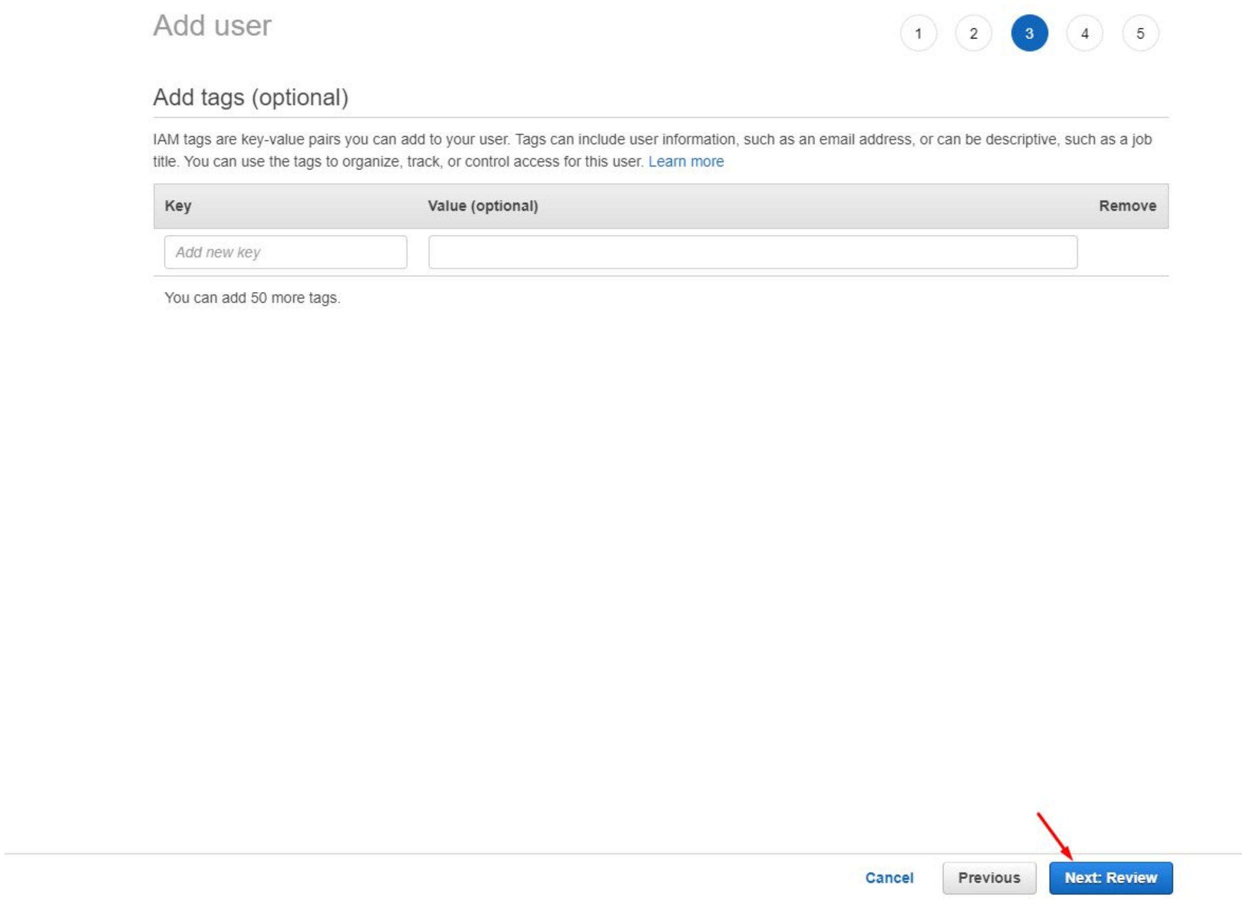
- After you have clicked the Add User button a page will appear on your browser. There you will see a form. And you need to type in your **User-name** and check the **Programmatic Access** as the **Access Type.** Just follow the instructions mentioned in the image below.



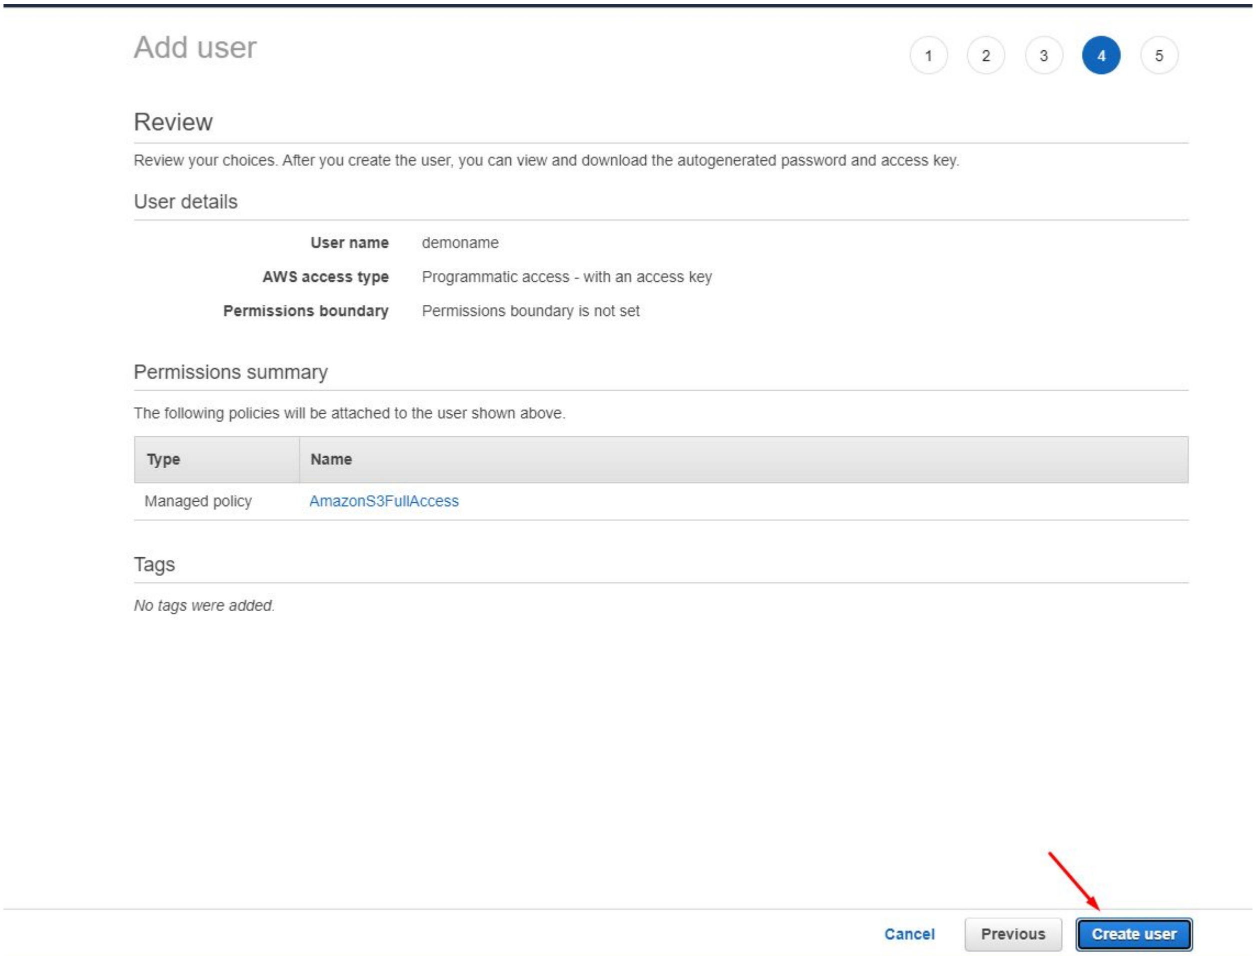
- After that you need to set some permissions. Inside the **Filter Policy** search bar search for the text **'s3'** And then some of the search results will be shown as shown below. From there check **AmazonS3FullAccess** and click the **Next** button.



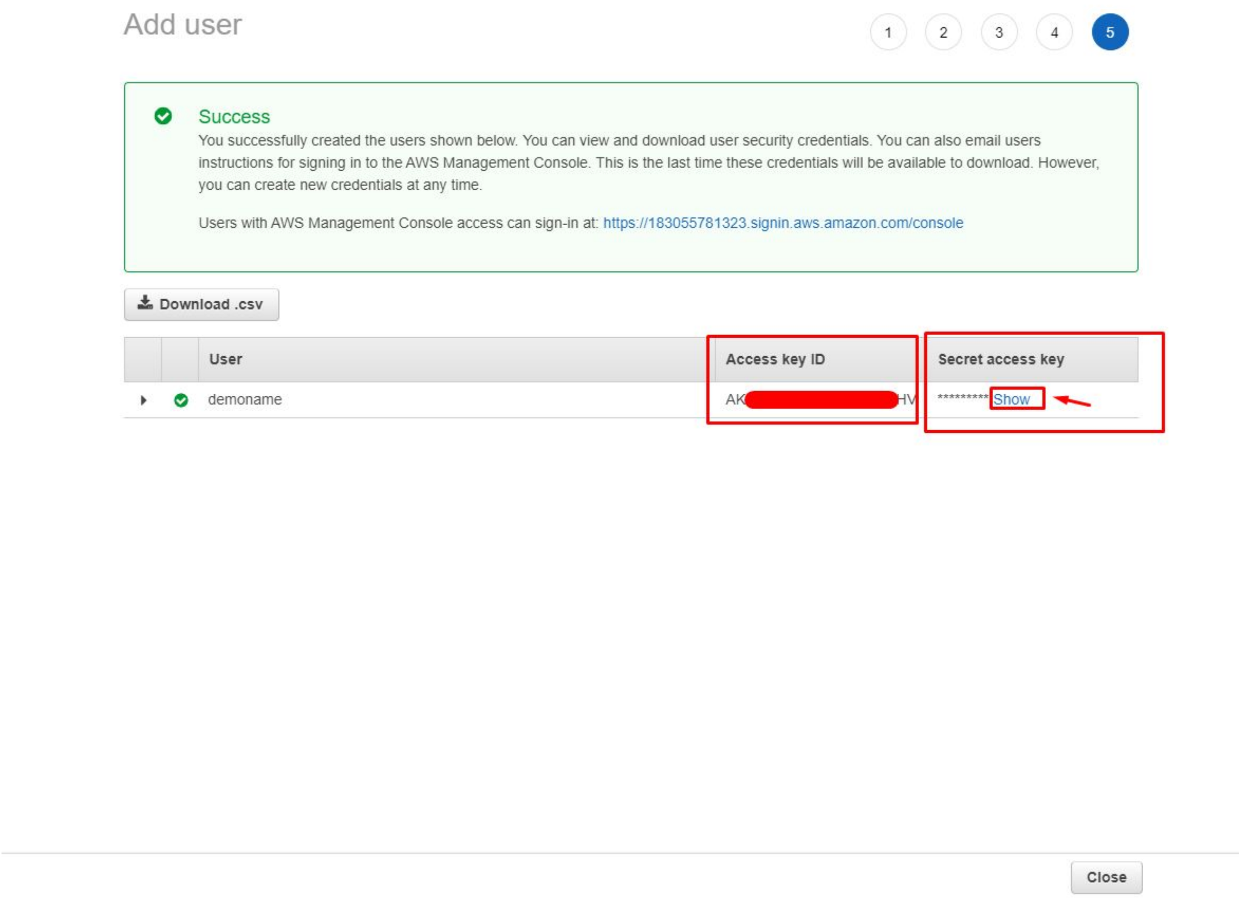
- For the next option click next without changing anything at all.



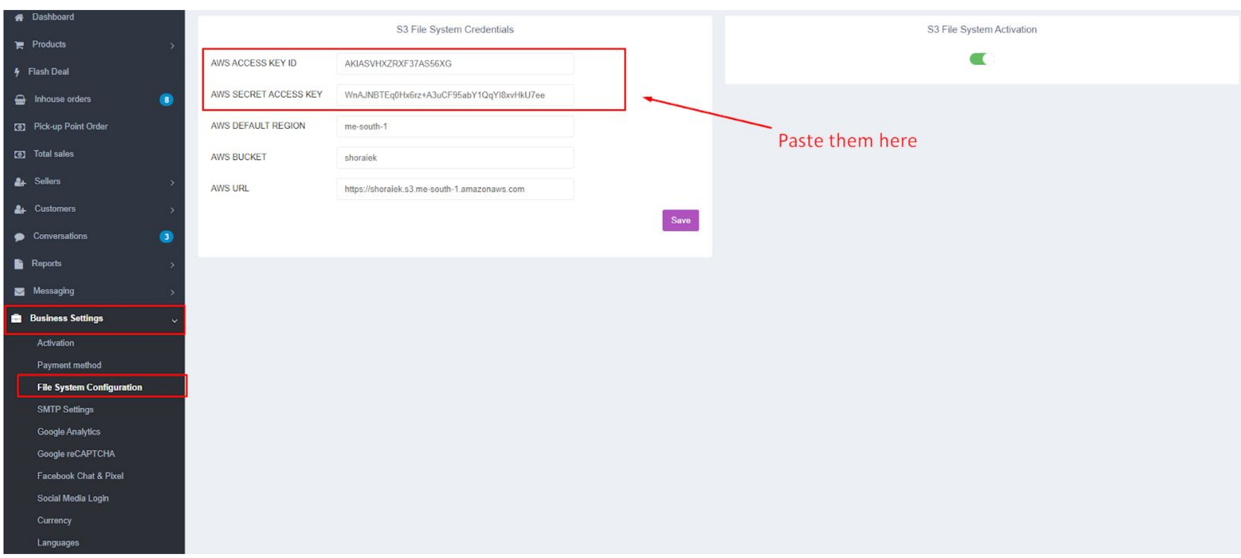
- Finally click **Create User** .



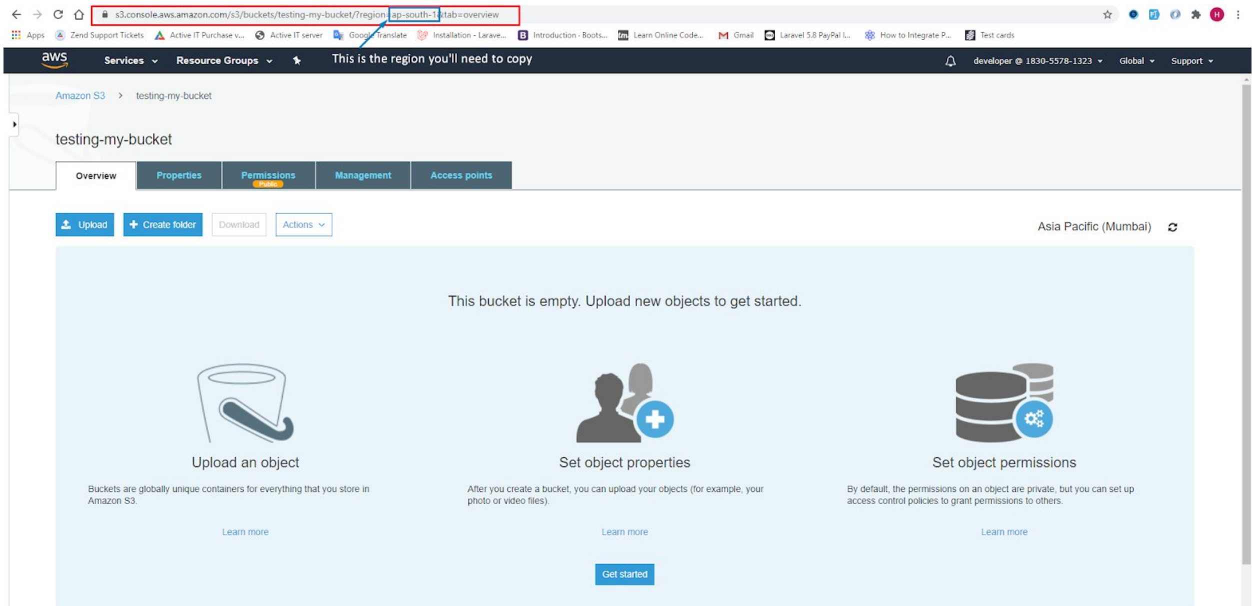
- After you have created the user you will be directed to a page where you will find two keys.
    - Access Key ID and
    - Secret access key.



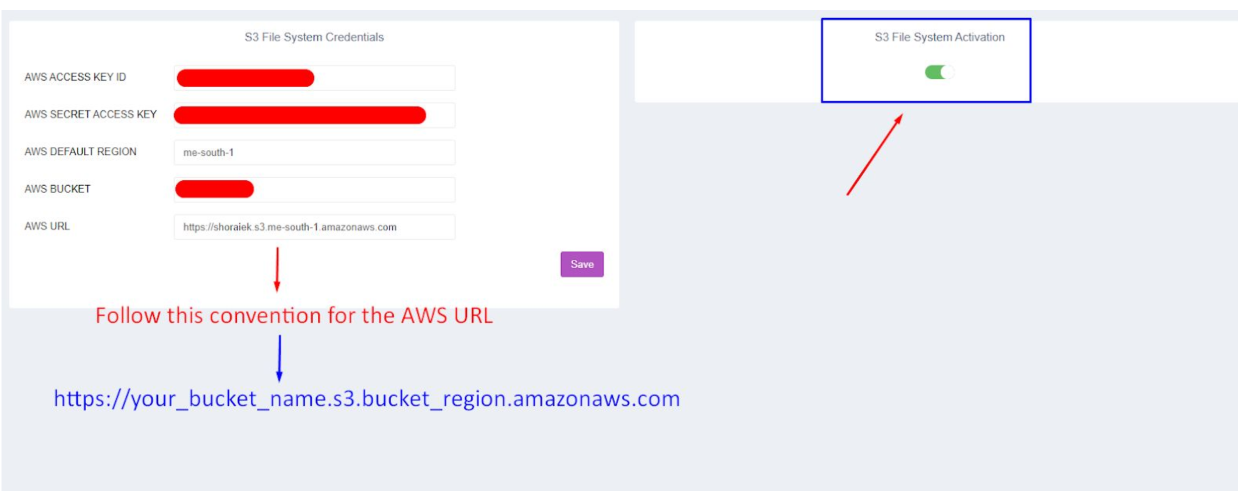
- Copy these two keys and then go to your admin panel and go to the **Business Settings** menu and then to the **File System Configuration** sub-menu. And then there you will find the two fields where you will need to paste those two keys that you have just copied.



- Now you need to set your bucket region. For that go to your bucket details and follow the instruction shown inside the image to find the bucket region. Copy your bucket region and paste it inside the field **AWS DEFAULT REGION** field residing inside **File System Configuration**'s submenu under the **Business Settings** Menu inside your admin panel.



- Also you need to insert your bucket name inside the **AWS BUCKET** field.
- And for the **AWS URL** just follow the convention mentioned inside the image below.



- And if you've followed all of the instructions mentioned above you should be able to upload your files inside the bucket of your amazon server's s3 file system.
- And also don't forget to activate your S3 File System shown inside the **blue box pointed out by a red arrow**.

52. How to migrate existing uploaded files to s3?

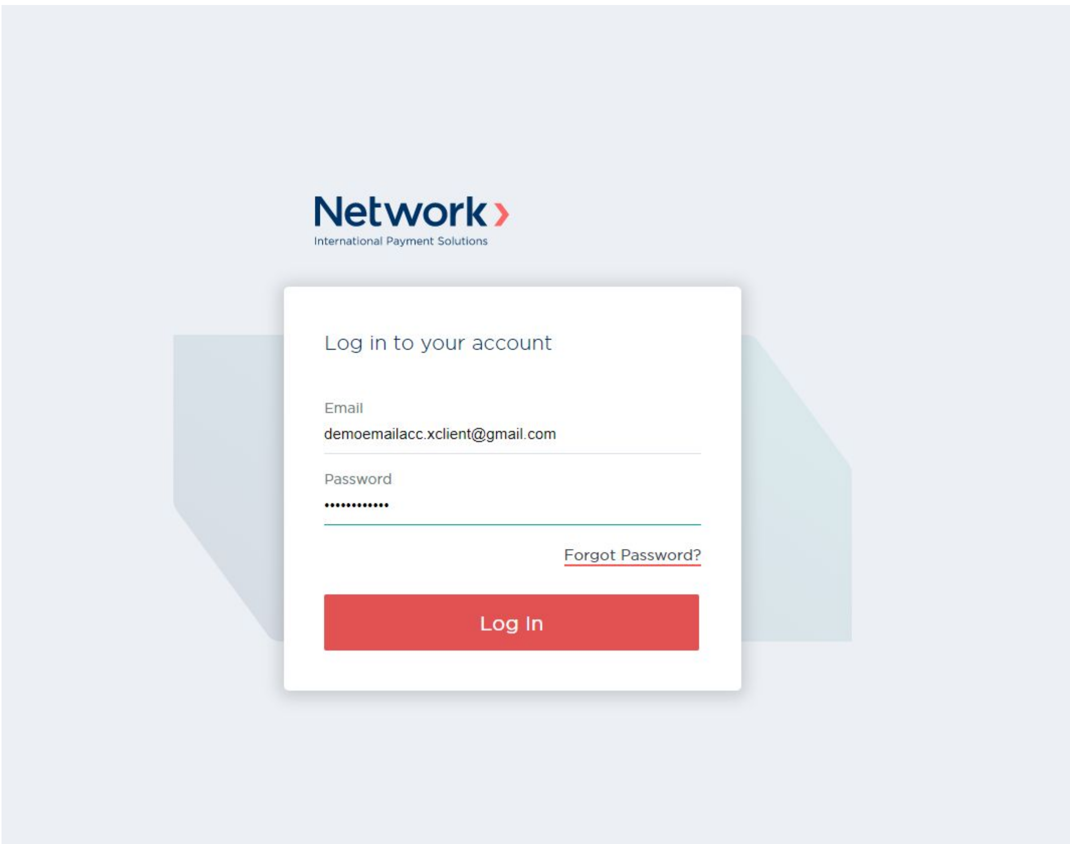
Ans: To migrate to amazon s3 file system follow the procedure mentioned below:

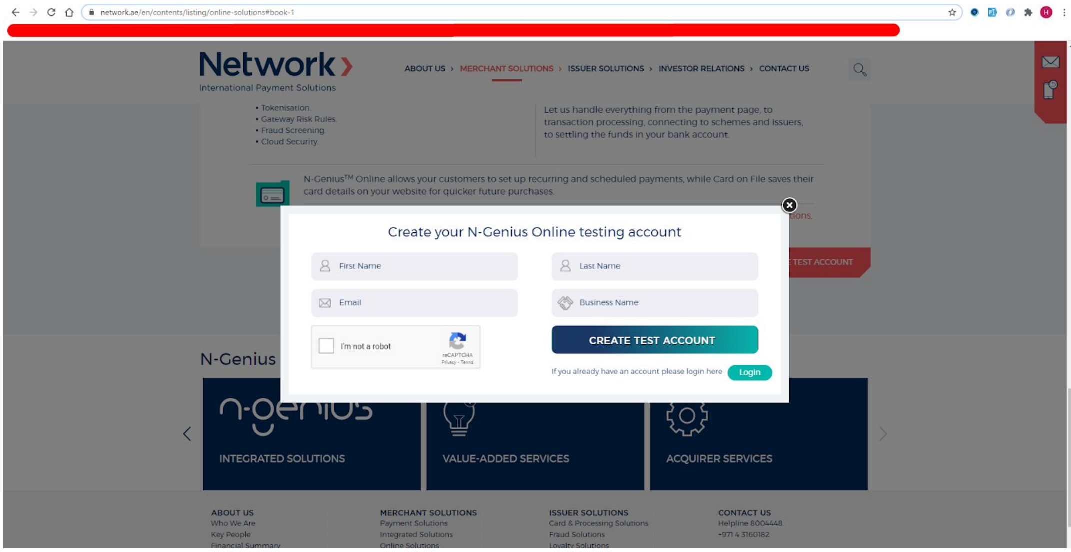
- Download all files from the public/uploads folder.
- Create a folder named uploads in the s3 bucket.
- Upload all downloaded files to the uploads folder of s3 bucket.

53. How to configure Ngenius credentials(test account)?

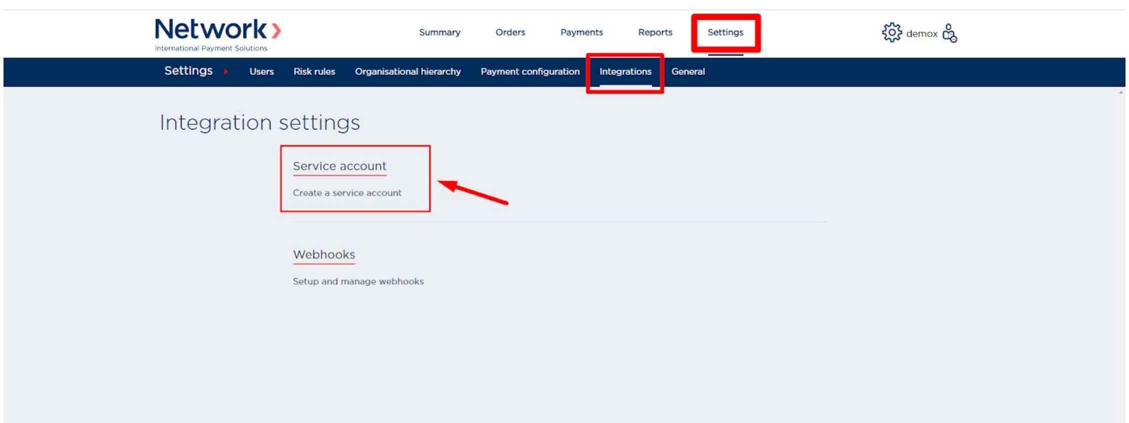
And: To configure ngenius you need to follow the steps mentioned below.

- First login to the Ngenius developers panel. Ngenius developers panel
- Or create an account if one does not exist.

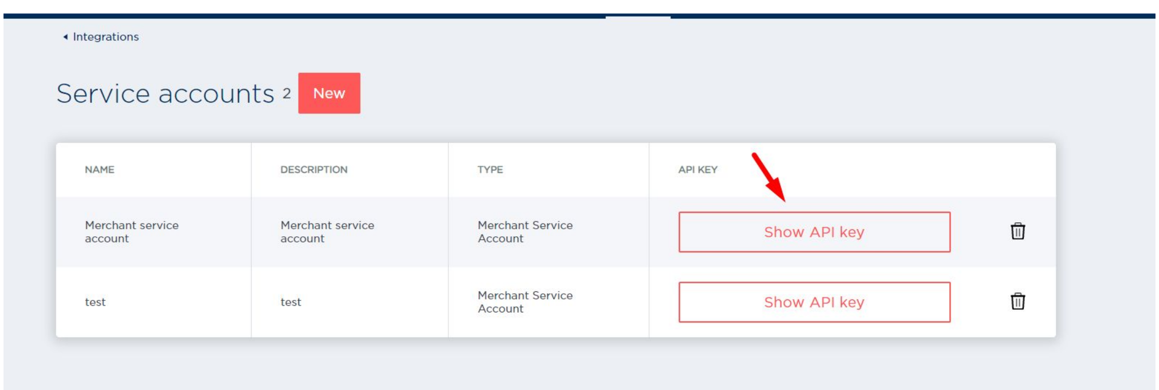


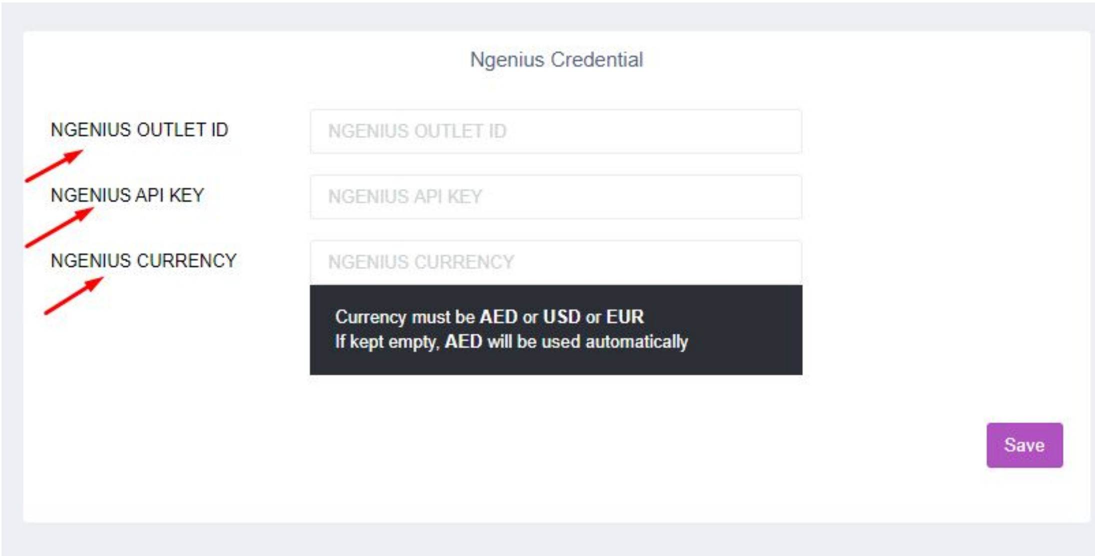


- After that go to the **Settings** -> **Integrations** -> **service account.** Create one service account if it does not exist.



- There you will find the API key. Copy that API key and paste it inside your Ngenius credentials **NGENIUS API KEY** field inside the **Payment Method** sub-menu residing in the **Business Settings** menu.





- After that you need the OUTLET ID of your ngenius account for that you need to go the **Settings** ->**Organizational Hierarchy** then click the **instant_singup_outlet** . After that you will find your reference key pointed out with the red arrow; copy that key and paste it inside the you **NGENIUS_OUTLET_ID** field residing inside the **Payment Method** sub-menu residing in the **Business Settings** menu.
- Finally, Set your currency as **AED, USD or EUR** and click the **Save** button**.** If you have followed all of the steps mentioned above your app should be ready to go.
